

- 1] Print all even numbers from 1 to 50 using for loop in single line.

```
let number = " ";
```

```
for (let i = 0; i <= 50; i++) {
```

```
  if (i % 2 == 0) {
```

```
    console.log(i);
```

```
  }
```

```
}
```

- 2] Find the factorial of a given number using while loop.

```
let number = 6;
```

```
let factorial = 1;
```

```
let i = 1;
```

```
while (i <= number) {
```

```
  factorial = factorial * i;
```

```
  i++;
```

```
}
```

```
console.log(factorial);
```

- 3] Reverse "JavaScript"

~~let name =~~

```
let letter = "JAVASCRIPT";
```

```
let value = "";
```

```
for (i = 0; i < letter.length; i++) {
```

```
    value = value + letter[i];
```

```
}
```

```
console.log(value);
```

5] Find the highest value.

~~const~~

```
const number = [45, 12, 89, 34, 67, 90, 23];
```

```
let highnonumber = number[0];
```

```
for (let i = 1; i < number.length; i++) {
```

```
    if (number[i] > highno) {
```

```
        highno = number[i];
```

```
    }
```

```
console.log("high no = ", highno);
```

O/P

high~~no~~ no = 90.

5] Array print odd number & find their total.

```
const number = [10, 15, 20, 25, 30, 35, 40];  
let total = 0;  
for (let i = 0; i < number.length; i++) {  
  if (number[i] % 2 !== 0) {  
    console.log(number[i]);  
  }  
}
```

7] Create an object called student with name, age, course & mark.

```
const student = {  
  name: "Moni", age: 22,  
  course: "Full stack", mark: 95};  
console.log(student.name);  
console.log(student.age);  
console.log(student.course);  
console.log(student.mark);
```

8) create three different functions square.

Normal function

```
function square1(num) {  
  console.log(num * num);  
}
```

square1(5);

O/P

25

2. Function

~~const square2 = function~~

const square2 = function (num) {

console.log(num * num);

};

square2(5);

O/P

25

3. Arrow function.

const square3 = (num) => {

console.log(num * num);

};

square3(3);

O/P
9

- 10] Create function that accepts name & age as parameter & returns formatted using template literal.

~~const~~

function details(name, age) {

"my name is \$ {name} and I am

{age} years old"

console.log(details);
